Introduction

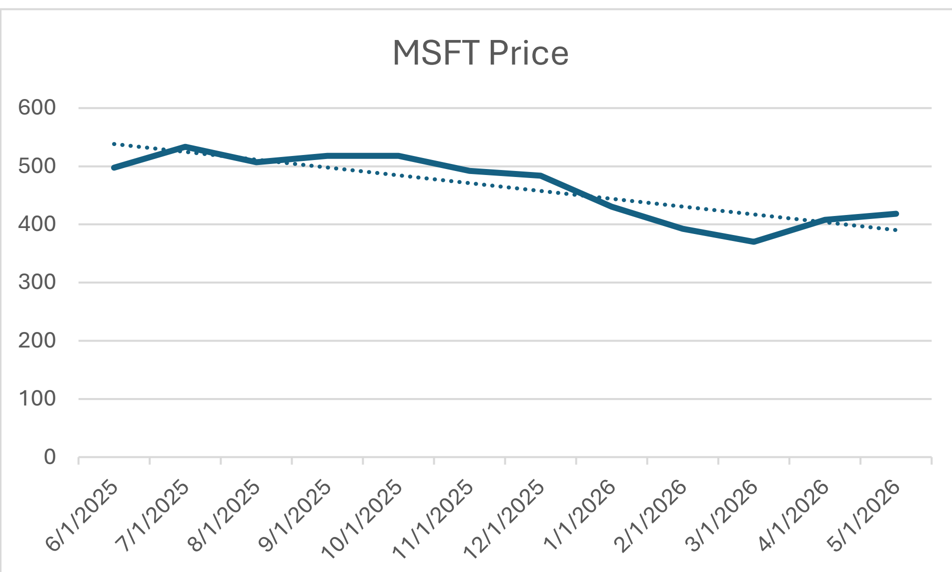
The purpose of this report is to analyse the growth and performance of these U.S tech-based companies (Microsoft, Apple and NVIDIA)

Microsoft Corporation (MSFT): A global technology company that develops, licenses, and supports software, services, and hardware devices. Its core offerings span cloud computing (Microsoft Azure), personal computing (Windows, Surface devices), productivity tools (Microsoft Office), video gaming (Xbox), and enterprise artificial intelligence.

Apple Inc. (APPL): A multinational technology corporation that designs, manufactures, and markets consumer electronics, software, and online services. Best known for the iPhone, Mac, and Apple Watch, the company is famous for its sleek product design, user-friendly interfaces, and tightly integrated software and hardware ecosystems

NVIDIA Corporation (NVDA): A premier American semiconductor and accelerated computing company that powers the world's Artificial Intelligence (AI) infrastructure. Originally famous for inventing the GPU to render high-end video game graphics, it now acts as the primary hardware and software engine driving the global AI industry.

Price Analysis



As at 1/6/2025 MSFT stock price was valued at $497.41 and as of today 5/25/2026 it's valued $418.57

High price - $533.5

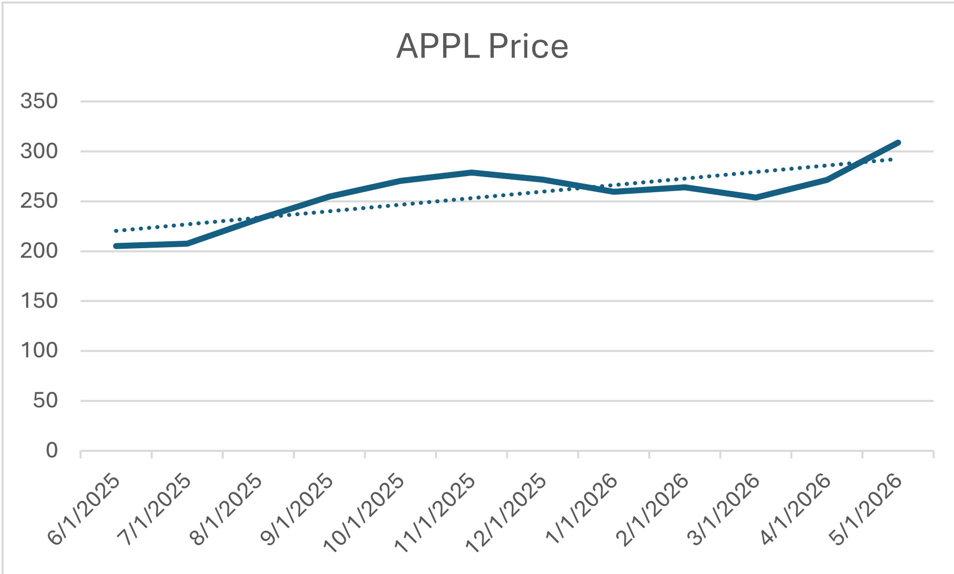
Low price - $370.17

EPS – $16.76

P/E Ratio – 25

Debt-to-Equity-0.80

Market Capitalization: $3,090,451,689,905



As at 1/6/2025 APPL stock price was valued at $205.17 and as of today 5/25/2026 it's valued $308.82

High Price - $308.82

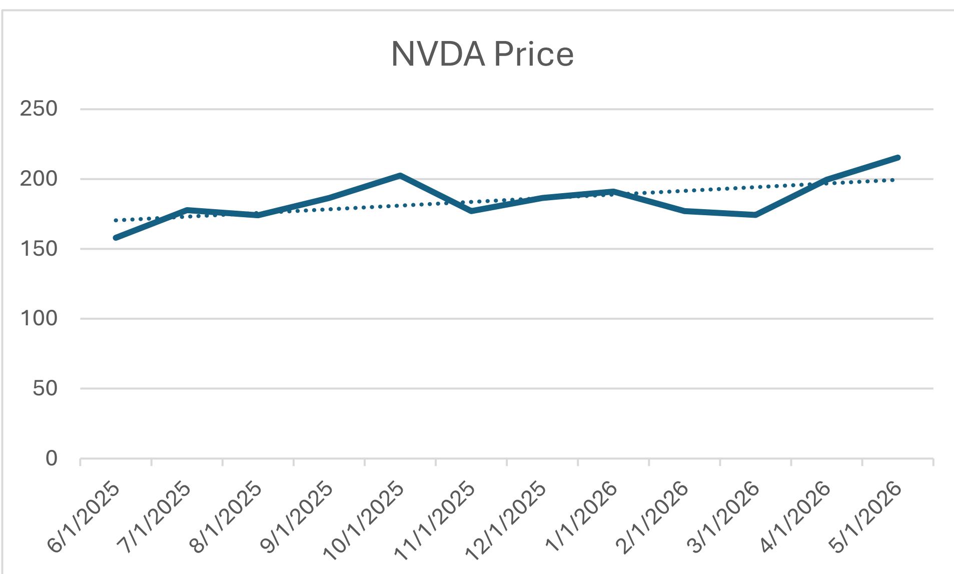
Low Price - $205.17

EPS – $8.7

P/E Ratio – 35.49

Debt-to-Equity-3.87

Market Capitalization: $4,528,552,475,480



As at 1/6/2025 MSFT stock price was valued at $157.99 and as of today 5/25/2026 it's valued $215.39

High Price - $215.39

Low Price - $157.99

EPS – $7.98

P/E Ratio – 26.99

Debt-to-Equity-0.31

Market Capitalization - $5,199,612,000,000

Recent News

Apple Inc: AAPL Hits New Record Highs. Apple shares touched new record levels Tuesday, extending a breakout rally that has accelerated ahead of the company's upcoming Worldwide Developers Conference (WWDC), which is scheduled for June 8-12.

Microsoft Corporation: Microsoft and OpenAI aren't as close and intertwined as they were a year ago. While they still work together, both have been distancing themselves from one another and have updated their partnership agreement multiple times.

NVIDIA: NVIDIA has once again emerged as the frontrunner in AI demand after reporting fiscal first-quarter 2027 revenue growth of 85%, as hyper-scalers accelerated "AI factory" deployments and agentic AI workloads. At the same time, Taiwan Semiconductor has been benefiting from surging orders for 3nm wafers and advanced packaging technologies such as CoWoS, prompting the company to lift its 2026 capital spending target.

Conclusion

This report analysed the growth and performance of Microsoft (MSFT), Apple (AAPL), and NVIDIA (NVDA), three of the most influential technology companies in the United States. The analysis focused on stock price movement, earnings performance, valuation ratios, debt levels, market capitalization, and recent industry developments.

From the analysis, Microsoft demonstrated strong financial stability and operational strength despite a decline in share price over the one-year period. The company continues to maintain a strong market position through its cloud computing services, enterprise software products, and investments in artificial intelligence technologies. Its moderate debt-to-equity ratio and strong earnings per share indicate sound financial management and long-term growth potential.

Apple showed strong stock price appreciation and achieved new record highs during the review period. The company's high market capitalization reflects strong investor confidence driven by its globally recognized brand, innovative products, and loyal customer ecosystem. However, its relatively high debt-to-equity ratio suggests that the company relies more heavily on financing compared to the other firms analysed.

NVIDIA emerged as one of the strongest growth companies among the three, supported by rising global demand for artificial intelligence infrastructure and advanced semiconductor technologies. The company recorded strong revenue growth and maintained a strong market valuation, showing that investors remain optimistic about the future of AI-driven industries.

Overall, the report shows that all three companies remain financially strong and highly competitive within the global technology sector. While Microsoft offers stability and diversified business operations, Apple demonstrates strong consumer market dominance, and NVIDIA provides significant growth opportunities through AI innovation. Therefore, each company presents unique investment strengths, making them attractive to investors depending on their financial goals, growth expectations, and risk tolerance.
